

Pricing & execution lifecycle

Inbound RFQ · RFS · IOI → price → quote → receive & execute orders. One engine, three doors.

Client / counterparty celnet engine — event processor · pricing · best-ex Dealer / trader Execution · venues · book feedback loop

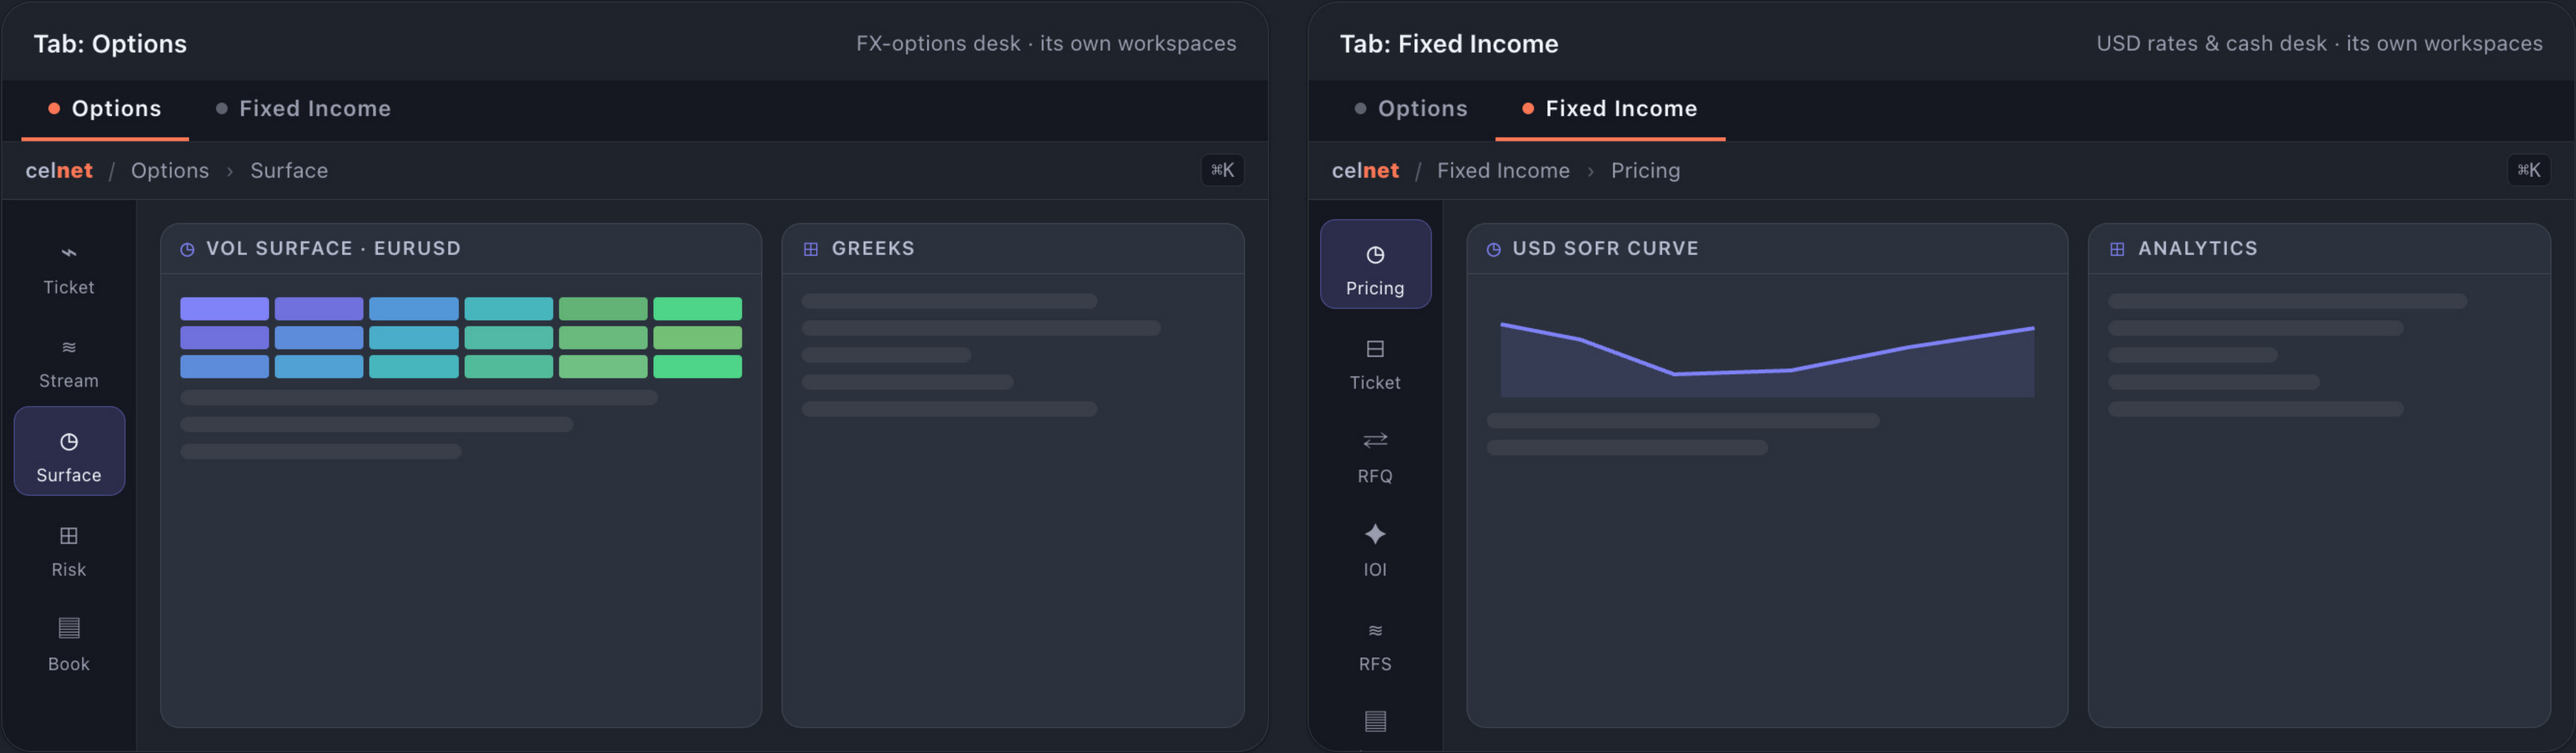

One engine, three doors. Whether the request arrives as an **RFQ**, an **RFS** stream subscription, or an **IOI**, it lands on the same edge → the central event processor prices it off one immutable curve snapshot → best-execution scans external venues and the internal book → if it's inside policy the price is **auto-quoted**, otherwise the **dealer** reviews skew/size and approves, counters or passes. The client's order is then captured, **internalised** against our axe/book where it improves the level (or routed to a venue), filled, and booked — with positions feeding risk straight back into the next re-mark.

celnet · Fixed Income · process diagram (mockup) — USD rates & cash desk · best-ex audited end-to-end.

One shell, two desks — Options & Fixed Income tabs

A top-level asset-class tab layer sits above the workspace rail. Switching the tab swaps the **left-rail workspace set** and the workspaces it renders; the surrounding chrome and the pricing engine are shared. The two desks never bleed into each other, but a trader moves between them in one click.

SHARED ACROSS BOTH TABS

- > Top bar — wordmark, scope/breadcrumb, command palette (⌘K), saved views, auth
- > The pricing / central-event-processor engine & entitlements
- > Status ribbon, theming, keyboard model

SWAPS WITH THE ASSET-CLASS TAB

- > **Options:** Ticket · Stream · Surface · Risk · Book
- > **Fixed Income:** Pricing · Ticket · RFQ · IOI · RFS · Blotter
- > Per-desk scope, instruments, layout & ⌘-number hotkeys

celnet · navigation architecture (mockup) — the D2 asset-class tab layer. Each FI workspace in this set is shown on the following pages.

celnet internal liquidity

PRICE CONSTRUCTION → EXECUTION SPINE

how a single immutable pricing snapshot flows to every response channel

1 · MARKET DATA IN (OPERATOR-SUPPLIED DATA-PROVIDER ACCESS)

STATIC / REFERENTIAL

Bond static, schedules, corporate actions, calendars

REAL-TIME

Quotes · axes · prints from venues & dealers

HISTORICAL

Quotes · prints · missed — for RV & backtest

2 · CURVE CONSTRUCTION (CELNET-RATES)

INSTRUMENTS

O/N SOFR · futures strip · OIS swaps → bootstrap

USD SOFR CURVE

single OIS-discount · log-linear on log-DF

ANALYTICS

PV · yield · DV01 · key-rate · G/Z-spread · ASW

3 · CENTRAL EVENT PROCESSOR — ONE SNAPSHOT, EMBEDDED BEST-EXECUTION ANALYTICS

FAIR VALUE + RISK

immutable snapshot, same numbers for every channel

EXTERNAL LIQUIDITY

scans venues in real time (Tradeweb · MarketAxess · BrokerTec...)

INTERNAL LIQUIDITY

internalisation · axes · market-making book

4 · RESPONSE CHANNELS (THIS MOCKUP SET)

RFQ / RFM

respond to a client request with a best-ex two-way

IOI / AXES

publish & respond to indications of interest

RFS STREAM

continuous executable prices (follow-on)

Pricing desk

How a price is built: the USD SOFR curve from its bootstrap instruments, and a bond/swap/future priced off it — PV, yield, DV01, key-rate ladder, swap-spread/ASW.

Open >

RFQ response

How an RFQ is answered: incoming request blotter, model fair value, the best-execution composite of external venues + internal axes, and the suggested two-way to send.

Open >

IOI & axes

How IOIs are answered: our published axe inventory (model-priced), incoming client IOIs, match scoring against the book, and one-click respond / firm-up.
